

KEGG Pathway Enrichment Across Evolutionary Clades

Cumulative gene sets per clade | Human Diseases excluded

Unicellular							Multicellular non-vertebrate										Vertebrates		
Integrin signaling																			
p53 signaling pathway																			
TGF-beta signaling pathway																			
FoxO signaling pathway																			
Growth hormone synthesis, secretion and action																			
Axon guidance																			
Relaxin signaling pathway																			
Th17 cell differentiation																			
Neurotrophin signaling pathway																			
Apoptosis - multiple species																			
Natural killer cell mediated cytotoxicity																			
IgSF CAM signaling																			
Nucleotide metabolism																			
Drug metabolism - other enzymes																			
Pyrimidine metabolism																			
Purine metabolism																			
Rap1 signaling pathway																			
Focal adhesion																			
Vasopressin-regulated water reabsorption																			
Metamonada							Choanoflagellata										Actinopterygii		
SAR							Ctenophora										Amphibia		
Rhodophyta							Porifera										Metatheria		
Discoba							Placozoa												
Viridiplantae							Cnidaria												
Amoebozoa							Spiralia												
Fungi							Ecdysozoa												
							Ambulacraria												
							Cephalochordata												
							Tunicata
